

Quiz

Data Formatting in Python

1.

How would you add one to each element in the column **df["a"]** and assign it back to the column **df["a"]**?

1 point

- ☐ 1 `df["a"]+1`
- ☒ 1 `df["a"]=df["a"]+1`
- ☐ you can't do this in Python

2.

How would you rename the column "city_mpg" to "city-L/100km"?

1 point

- ☐ 1 `df.rename(columns={"city_mpg": "city-L/100km"})`
- ☒ 1 `df.rename(columns={"city_mpg": "city-L/100km"}, inplace=True)`
