

Quiz

GroupBy in Python

1. Consider the dataframe **df**; how many different groups would there be if you applied the **groupby** method to the column 'A'?

1 point

	A	B
0	a	1
1	b	2
2	a	1
3	c	2

- ☐ 2
- ☐ 4
- ☒ 3

2. Select the appropriate description of a pivot table:

1 point

- ☒ A pivot table has one variable displayed along the columns and the other variable displayed along the rows.
- ☐ A pivot table contains statistical information for each column
